

# Ordinary Differential Equations

## Table of Contents

### Chapter One- Ordinary Differential Equations of Order One

#### 1. Introduction to Ordinary Differential Equations

- 1.1 A Simple Mathematical Model
- 1.2 The Notion of a Solution
- 1.3 A Population Model
- 1.4 Some Linear Examples

#### 2. Solutions of First Order Ordinary Differential Equations

- 2.1 Separable Equations
- 2.2 Exact Equations
- 2.3 Linear Equations
  - 2.3.1 Integrating Factors
  - 2.3.2 Variation of Parameters
  - 2.3.3 Undetermined Coefficients
  - 2.3.4 Amplitude and Phase

#### 3. Existence and Uniqueness

#### 4. First Order Nonlinear Equations

- 4.1 Some Preliminary Remarks
- 4.2 Autonomous First Order Equations- A population model
- 4.3 Critical Points for Nonlinear Equations

#### 5. Applications of First Order Equations

- 5.1 Viscouse Friction
- 5.2 A Dissolving Pill
- 5.3 A Water Heater Strategy
- 5.4 Absorption of Medications

### Chapter Two- Elements of Linear Algebra

#### 1. Notation and Terminology

#### 2. The First Problem of Linear Algebra

- 2.1 Subspaces
- 2.2 Linear Independence and Dimension
- 2.3 Rank of a Matrix
- 2.4 Existence and Uniqueness for  $A\vec{x} = \vec{b}$
- 2.5 Echelon Form and the Rank of  $A$

#### 3. The Second Problem of Linear Algebra

- 3.1 Finding Eigenvalues and Eigenvectors of a Matrix\*
- 3.2 Discussion of Eigenvalues and Eigenvectors\*

## **Chapter Three- Systems of Linear Differential Equations**

- 1. Solution Methods for Linear Systems- Real Eigenvalues**
- 2. Solution Methods for Linear Systems-Complex Eigenvalues**
- 3. Exponential of an  $n \times n$  Matrix  $A$**
- 4. Repeated Eigenvalues**
- 5. The Inhomogeneous Equation**

## **Chapter Four- Dynamical Systems**

- 1. Introduction**
- 2. Dynamical Systems in 2-dimensions**
  - 2.1 Linear Dynamical Systems- classification
  - 2.2 Nonlinear Dynamical Systems
    - The Undamped Pendulum
    - The Damped Pendulum
    - A Predator-Prey Model
- 3. Additional Topics**
  - 3.1 Limit Cycles
  - 3.2 Equations that Separate
  - 3.3 Other Simple Systems
  - 3.4 Liapunov Functions

## **Chapter Five- Second Order Linear Equations**

- 1. Introduction**
- 2. Equations With Constant Coefficients- Homogeneous Solution**
- 3. Free Response of a Spring-Mass System**
  - 3.1 The Undamped Case
  - 3.2 The Damped Case
    - underdamped
    - critically damped
    - overdamped
- 4. Forced Response of a Spring-Mass System**
  - 4.1 Undetermined Coefficients
  - 4.2 Undamped Forced Response- beats and resonance
  - 4.3 Damped Forced Response
- 5. Variation of Parameters**
- 6. The Laplace Transform**

## **Chapter Six- Numerical Methods**

- 1. Euler's Method**
  - 1.1 Single First Order Equation by Euler's Method

1.2 First Order System by Euler's Method

**2. Runge-Kutta Methods**

2.1 Single First Order Equation by Runge-Kutta Method

2.2 First Order System by Runge-Kutta Method
