

## MATH 261 EXAM I PRACTICE PROBLEMS

These practice problems are pulled from actual midterms in previous semesters. Exam 1 typically has 6 problems on it, with no more than one problem of any given type (e.g., don't expect two problems about the angle between two planes). Also, **please be aware** that this is not intended as a comprehensive list of all possible problem types! In other words, you are responsible for all topics covered during the period leading up to this exam, whether they are represented in this list or not. See your notes and the suggested homework for a comprehensive list.

## SOLUTIONS

**WARNING:** Not all of these solutions are fully justified. Be sure to provide full justification with your solutions (especially where this is explicitly requested) so that we may provide partial credit, where applicable. If you are having trouble getting these answers, please come to office hours and/or exam review sessions. See the course website for details.
