Math 192. First-Year Seminar in Mathematical Sciences.

Guest Lecture Report

We will hear 3 or more guest lectures as part of this course. Pick one of these and write a unique and fascinating guest lecture report about it. It is due October 17 at the Math Festival. Here are some guidelines to consider.

**Originality:** No plagiarism: DO NOT COPY ANYTHING FROM, for example, the web. Come up with your own ideas. Write your own sentences.

**Content:** You could include -
- an explanation of your favorite topic in the lecture;
- something mathematical you learned from the lecture;
- description of problems that people study on this topic;
- a topic you’d like to understand better;
- an open question or conjecture;
- motivation for why this topic is worth studying.

**Structure:**
- at least 1 page and not more than 2 pages, with 1-inch margins;
- include an introduction and a conclusion
- use correct paragraph and sentence structure;
- well-written, correct grammar and spelling;
- concise, no excess filler;
- a reasonably sized visual feature such as an image or a graph is welcome (not required).
- include a bibliography; in this case, 1-2 web references will suffice.

Have fun!
